Consent Form
The mechanisms involved in facial recognition of emotions measured using presence/absence emotion detection tasks

Identification

Department of Psychoeducation and Psychology:
The Cyberpsychology **Laboratory.**(UQO).
In collaboration with the **laboratoire de recherche COllaborative en obésité et vie ACTIVe** : Coactiv'lab. (UQO).

Students: Alice Jeanningros.
Professors: Aurélie Baillot, Ph.D. Dr. and Stéphane Bouchard

Emergency contact: Prof. Stéphane Bouchard, Professor, 283 Alexandre-Taché Boulevard, Room C-2500, Gatineau, Quebec J8X 3X7 (819)595-3900, ext. 2360, stephane.bouchard@uqo.ca.

This study did not receive any funding and received approval from the UQO Research Ethics Board.

Project and procedure

We are hereby seeking your participation in the title research project, which aims to better understand the mechanisms of facial recognition of emotion on different faces. This project will consist of the use of computerized tasks to present faces with or without emotions and to specify the recognition of emotion or not.

Your participation in this research project consists of completing tasks that first measure your skills in recognizing facial expressions of pain by presenting your face with or without this emotion. You will be asked to indicate if you see an emotion in each face presented. This technique only requires the use of a computer. Then we will ask you to complete a task presenting these same faces again with Chinese ideograms, this will allow us to examine the way in which you make simple and quick judgments. Then a succession of different questionnaires concerning your motivations, attitudes and socio-demographic criteria will be presented to you. The study is scheduled to last approximately 25 minutes. It takes place online. At the end of this consent form, the contact information of the person in charge of this study will be shared with you in case you have any questions.

The confidentiality of the data collected as part of this research project will be ensured in accordance with the laws and regulations applicable in the province of Quebec and the regulations and policies of the Université du Québec en Outaouais. Both the data collected and the results of the research will not lead to your identification under

any circumstances given the attribution of a numerical code to your data.

Unless you consent to a secondary use as more fully described below, the data collected will not be used for any purpose other than those described in this consent form. The results will be disseminated through honorary and doctoral theses, scientific articles and scientific conferences (posters and/or oral communications). The data collected will be stored on UQO's secure servers and the only people who will have access to it are the professors in charge and their research assistants. The computer files, kept on the server, will be destroyed 7 years after the last publication of the results using software intended for this purpose. At any time during the study and until the results are published, you can contact the researcher and request the partial or complete destruction of your data. These will be deleted from computers and paper data will be shredded. The computer data deletion check will be performed to ensure that all data has been erased to confirm the correct deletion including in the computer recycle bin. We plan to securely destroy computer files using software intended for this purpose to prevent possible recovery of deleted files.

Your participation in this research project is voluntary. You are entirely free to participate or not, and to withdraw at any time without prejudice. When completing the questionnaires, the absence of an answer to a question will automatically terminate your participation. There is minimal risk associated with your participation: you may feel bored or tired. Participants who decide to terminate their participation will be able to notify us by phone or email, depending on their preference. Participants may withdraw from the project at any time, without prejudice. Unless otherwise advised by the participant, if the participant withdraws from the project or is withdrawn and in the absence of a request for data destruction, the information and material already collected as part of the project will nevertheless be retained, analyzed or used to ensure the scientific integrity of the project. However, no information will be collected after their authorization is withdrawn.

The contribution to the advancement of knowledge about visual processing of faces is the anticipated direct benefit. You are also invited to participate in a draw to try to win one of five $100 gift cards to be used in an online store of your choice (sports stores, bookstores, grocery stores, office automation, etc.).

You can contact the project leader, Stéphane Bouchard, for additional questions about the project or your rights as a research participant, at the following number: (819) 595-3900 #2360 and email address stephane.bouchard@uqo.ca. UQO's Institutional Committee on Ethics for Research Involving Humans has approved the research project in which you will participate. For information regarding the research team's responsibilities in terms of research ethics or to make a complaint or comments, you can contact the Chair of the Ethics Committee, Mr. André Durivage at 819-595-3900 # 1781 and email address: andre.durivage@uqo.ca.

Your approval certifies that you have clearly understood the information regarding your participation in the research project and indicates that you agree to participate. It does not mean that you agree to give up your rights and release researchers or officials from their legal or professional responsibilities. You are free to withdraw from the research project at any time without prejudice. Your participation should be as informed as your initial decision to participate in the project, so you need to know all the ins and outs of the project during the course of the research project. As a result, you should never hesitate to ask for clarification or new information during the project.

After reading the information about your participation in this research project Please complete the corresponding item in the online questionnaire. If you select “Yes,” this will indicate your agreement that you freely participated in our study. You may download this document for your records.

Consent to participate in the research project:

Participant approval through question in Limesurvey questionnaire “Study pain emotion recognition”.

Secondary Use of Collected Data

With your permission, we would like to be able to keep the data collected at the end of this project for other research activities in the following areas: face recognition, motivational studies and attitudes related to the projects of Stéphane Bouchard and Aurélie Baillot for which you are invited to participate today. The data collected in this study may also be used for a subsequent study related to this research. In order to preserve your personal data and identity, the data will be encrypted, i.e. your anonymity will be preserved with the help of an identification number. We are committed to respecting the same ethical rules as for the present project.

Consent to this component is not required to participate in this research project. If you agree, your data will be kept on UQO's secure server for a period of 7 years after the end of this project and then destroyed.

Consent to a secondary use:

Participant approval through a question in the LimeSurvey questionnaire “Pain Emotion Recognition Study”.
