The mechanisms involved in facial recognition of emotions measured using presence/absence emotion detection tasks and the measurement of motivation to respond without bias and weight bias

Identification

Department of Psychoeducation and Psychology:
The Cyberpsychology **Laboratory.**(UQO).
In collaboration with the **laboratoire de recherche COllaborative en obésité et vie ACTIVe** : Coactiv'lab. (UQO).

Students: Alice Jeanningros.
Professors: Aurélie Baillot, Ph.D and Stéphane Bouchard Ph.D

Emergency contact: Prof. Stéphane Bouchard, Professor, 283 Alexandre-Taché Boulevard, Room C-2500, Gatineau, Quebec J8X 3X7 (819)595-3900, ext. 2360, stephane.bouchard@uqo.ca

Project and procedure

We have invited your participation in the title research project, which aims to better understand the mechanisms of facial recognition of emotion on different faces. This project consisted of the use of computerized tasks to present faces with or without emotions and to specify the recognition of emotion or not, taking into account the motivation to respond without prejudice and prejudices related to weight.

We had to use a subterfuge to carry out this experiment. The study did not only focus on the recognition of emotions but also on the study of the impact of the motivation to respond without prejudice and the prejudices related to weight in relation to the recognition of these facial expressions in a person with obesity. Weight bias was measured using the Affect Misattribution Procedure test, which assesses the strength of the association between a concept (i.e. photo of a person with or without obesity and affective reactions) and thus measures automatic biases against obesity.

The true nature of the study could only be revealed to you at the very end since weight biases are subject to social desirability. To reveal that the study focuses on these could have led you to change your behaviours in order to conform to the social norm. The literature shows the presence of weight-related prejudice among the majority of the population. It is therefore very important to understand the nature and functioning of these prejudices in order to be able to develop methods to reduce them.

As mentioned in the first consent form, the confidentiality of the data collected as part of this research project will be ensured in accordance with the laws and regulations

applicable in the province of Quebec and the regulations and policies of the Université du Québec en Outaouais. Both the data collected and the results of the research will not lead to your identification under any circumstances given the attribution of a numerical code to your data.

Unless you consent to a secondary use as more fully described below, the data collected will not be used for any purpose other than those described in this consent form. The results will be disseminated through honorary and doctoral theses, scientific articles and scientific conferences (posters and/or oral communications). The data collected will be stored on UQO's secure servers and the only people who will have access to it are the professors in charge and their research assistants. The computer files, kept on the server, will be destroyed 7 years after the last publication of the results using software intended for this purpose. At any time during the study and until the results are published, you can contact the researcher and request the partial or complete destruction of your data. These will be deleted from computers and paper data will be shredded. The computer data deletion check will be performed to ensure that all data has been erased to confirm the correct deletion including in the computer recycle bin. We plan to securely destroy computer files using software intended for this purpose to prevent possible recovery of deleted files.

Your participation in this research project is voluntary. You are entirely free to participate or not, and to withdraw at any time without prejudice. There is minimal risk associated with your participation: you may feel bored or tired. Participants who decide to terminate their participation will be able to notify us by phone or email, depending on their preference. Participants may withdraw from the project at any time, without prejudice. Unless otherwise advised by the participant, if the participant withdraws from the project or is withdrawn and in the absence of a request for data destruction, the information and material already collected as part of the project will nevertheless be retained, analyzed or used to ensure the scientific integrity of the project. However, no information will be collected after their authorization is withdrawn.

The anticipated direct benefit is the contribution to the advancement of knowledge about the visual processing of faces, and the motivation to respond without weight bias. You are also invited to participate in a draw to try to win one of five $100 gift cards to be used in an online store of your choice (sports stores, bookstores, grocery stores, office automation, etc.).

You can contact the project leader, Stéphane Bouchard, for additional questions about the project or your rights as a research participant, at the following number: (819) 595-3900 #2360 and email address stephane.bouchard@uqo.ca. UQO's Institutional Committee on Ethics for Research Involving Humans has approved the research project in which you will participate. For information regarding the research team's responsibilities in terms of research ethics or to make a complaint or comments, you can contact the Chair of the Ethics Committee, Mr. André Durivage at 819-595-3900 # 1781 and email address: andre.durivage@uqo.ca.

Your approval certifies that you have clearly understood the information regarding your participation in the research project and indicates that you agree to participate. It does not mean that you agree to give up your rights and release researchers or officials from their legal or professional responsibilities. You are free to withdraw from the research project at any time without prejudice. Your participation should be as informed

as your initial decision to participate in the project, so you need to know all the ins and outs of the project during the course of the research project. As a result, you should never hesitate to ask for clarification or new information during the project.

After becoming aware of new information regarding your participation in this research project, you may decide to withdraw your consent and request the removal of your data if you no longer agree with the objectives of the study as now disclosed. Please complete the corresponding item in the online questionnaire. If you select “Yes,” this will indicate your agreement that you freely participated in our study. You may download this document for your records.

Consent to participate in the research project:

Participant approval through question in Limesurvey questionnaire “Study pain emotion recognition”.

Secondary Use of Collected Data

With your permission, we would like to be able to keep the data collected at the end of this project for other research activities in the following areas: face recognition, motivational studies and attitudes related to the projects of Stéphane Bouchard and Aurélie Baillot for which you are invited to participate today. The data collected in this study may also be used for a subsequent study related to this research. In order to preserve your personal data and identity, the data will be encrypted, i.e. your anonymity will be preserved with the help of an identification number. We are committed to respecting the same ethical rules as for the present project.

Consent to this component is not required to participate in this research project. If you agree, your data will be kept on UQO's secure server for a period of 7 years after the end of this project and then destroyed.

Consent to a secondary use:

Participant approval through question in Limesurvey questionnaire “Study pain emotion recognition”.
